

PROJECT REPORT NO. 1

Project Report No. 1

The following report has been made available for posting on www.carnicom.com. The author is not specified at this time.

20 September 2000

PROJECT REPORT No. 1

SUBJECT: AIRCRAFT "CHEMICAL TRAILS" IN THE ATMOSPHERE and ASSOCIATED MILITARY PROJECTS

PROJECT OBJECTIVES:

- 1) Determine nature of persistent aerosol chemical trails emitted by subsonic aircraft.
- 2) Determine nature of and investigate phenomena associated with the atmospheric aerosol trails and resulting cloud cover.
- 3) Summarize overview observations of government and individual agency involvement in clandestine military and civilian operations and projects within the borders of the United States for dissemination to interested parties.

RESEARCH GROUP:

Researchers assigned to this project have diverse backgrounds and are trained in and associated with a variety of disciplines including electronics, communications and environmental engineering, general medicine, biomedical research, chemistry, government/political, NSA/CIA, and military theory and technology. A team of organized and dedicated professionals has devoted thousands of hours to this project over the past year, and read hundreds of scientific, government and military documents found in the public domain. Individual researchers have conducted in-depth investigation by other means, including direct observation and inquiry.

FINDINGS:

Aerosols – Polymer Fibers:

It appears that aerosol chemical trails are being deliberately discharged into the atmosphere from military and civilian registered aircraft over the continental United States, Canada and Mexico. It appears that selected commercial airliners have been

modified and equipped with specialized aerosol dispersion devices. Aircraft emission of aerosol chemical trails is being consistently reported in several other countries worldwide.

Aerosol chemicals deliberately emitted from subsonic aircraft are currently understood to be a base barium salt mixture.

Several types of experimental polymer fibers are repeatedly being found in various locations subsequent to observed incidence of aerosol discharge by subsonic aircraft. Research and development of electro-active polymer fibers is identified and described in Defense Advanced Research Projects Agency, DARPA, documents. Other polymer fiber types are mentioned in other government and military documents.

It is believed that the combination of a barium salt mixture and polymer fibers in the atmosphere may be the chemical and physical irritant that is responsible for the recent nationwide epidemic increase in cases of asthma, allergies and upper respiratory symptoms including pneumonia.

Based on the study of various military and scientific documents, the polymer fibers would appear to have several applications in conjunction with the barium salt mixture:

- a) Aircraft cloaking when irradiated.
- b) Advanced Radar Applications.
- c) Biological applications – delivery, decontamination and detection.
- d) Communications applications.
- e) Military weather modification.
- f) Other applications, including the VTRPE computer propagation and similar programs.

Military Projects and Experiments:

Insight is required to categorize the many layers of military projects and experiments currently in progress for they are numerous. An overwhelming array of ongoing military research and development – and defense related activity – is layered from ground level into space, according to unclassified documents studied and discussed. Space Warfare Battle Plans and space weapons have been developed and include advanced laser and refinement of Nikola Tesla's scalar [directed energy] weapons technology.

Weather Modification and Associated Programs:

Inventor and scientist Nikola Tesla's concepts of "directed energy" have been developed, refined and applied. High Frequency Active Auroral Research Project

[HAARP] ionospheric "heaters" are positioned around the world [Alaska, Ukraine, Norway, Russia, Puerto Rico, etc.] and are used to "heat" and modify the ionosphere. The United Nations organization has knowledge of, and sanctions, the HAARP project. This is a military project.

Example: URSI, Commission G –

Scientists worldwide are involved in different aspects of environmental research projects and experiments. Universities worldwide, including the University of Massachusetts/Lowell, the University of Colorado, the University of California/Davis and the University of Texas/Arlington, just to name a few, are deeply involved in data collection and technology development.

One of government's primary military objectives is to control rain, drought, storms, tornadoes, hurricanes, and weather patterns generally. Precipitation suppression and enhancement strategies are being refined specifically for implementation in the conduct of future warfare. This activity is in direct violation of U.N. treaties.

Armies will no longer be needed; new computerized virtual warfare technology has been developed, refined and applied.

Areas of ongoing R&D:

- * Optics-based Network Communications systems above the earth.
 - * Optical Switching Systems.
 - * Scalar ["directed energy"] Missile Defense System above the earth. Ground based missile defense against incoming missile system is no longer a viable consideration.
- Proposed missile defense system is a Tesla scalar system above the earth and, again, in violation of U.N. Treaty.
- * Military Weather Modification.
 - * Virtual Warfare Systems.
 - * Biological Warfare – aggressive.
 - * Biological decontamination techniques.
 - * Systems apparatus for potential chemical and electrical influence of human behavior.
 - * Electrical power transfer.

Nuclear Waste disposal in space:

Preliminary evidence indicates that there is an ongoing project which involves the breaking down of radioactive waste using plasma processing techniques. It is believed that the "benign" components of this separation process are being disposed of in the upper regions of the atmosphere.

Ozone Layer [tropospheric and stratospheric]:

There is great concern among the scientific community that the ozone layer has been seriously damaged. We believe the reason for the damage has not yet been mentioned or addressed. Ongoing study of this problem by individual researchers is eliciting concrete evidence that, at the very least, the atmospheric chemistry and circulation of the earth's atmosphere have been disrupted. There is a growing body of evidence to justify concern that the problems with our atmospheric chemistry will extend well into the 21st century.

CONCLUSION:

The investigative study group individually and collectively is negatively impressed by the deceitful and disingenuous nature of those parties involved in the projects and experiments. Never in the history of civilization on the earth has there been such a complex, overwhelming array of secretive and potentially destructive experiments ongoing, the logistics of which are cloaked in deliberate lies to the citizens they ultimately affect.

We have outlined the general areas of science, military and government activity in this, our Report #1. This preliminary report is intended to focus your attention on and encourage your investigation into these areas which we feel will ultimately affect your life and the lives of your children. We have approached this investigation seriously and reported our findings honestly, to the best of our abilities.
